

The APS Monitor

Our robust wireless Energy Monitoring & Analysis (EMA), gives you around-the-clock monitoring of your solar installation through any web-enabled device, anywhere, anytime. This advanced web-based software detects and alerts the user to any performance issues, ensuring the most efficient output of your solar PV array.

The APS Monitor wireless Energy Monitoring & Analysis (EMA) software, enables comprehensive, web-based monitoring that analyzes and reports the performance of each module in your PV solar system. This real-time data can be accessed from any web-connected device, anywhere, anytime.

In contrast to string inverter technologies, the APS Monitor provides monitoring and control of each individual module and microinverter in your array. This allows installers and users the capability to more effectively optimize the array over its lifetime.
