

Minimum work – maximum time-saving IBC TopFix 200

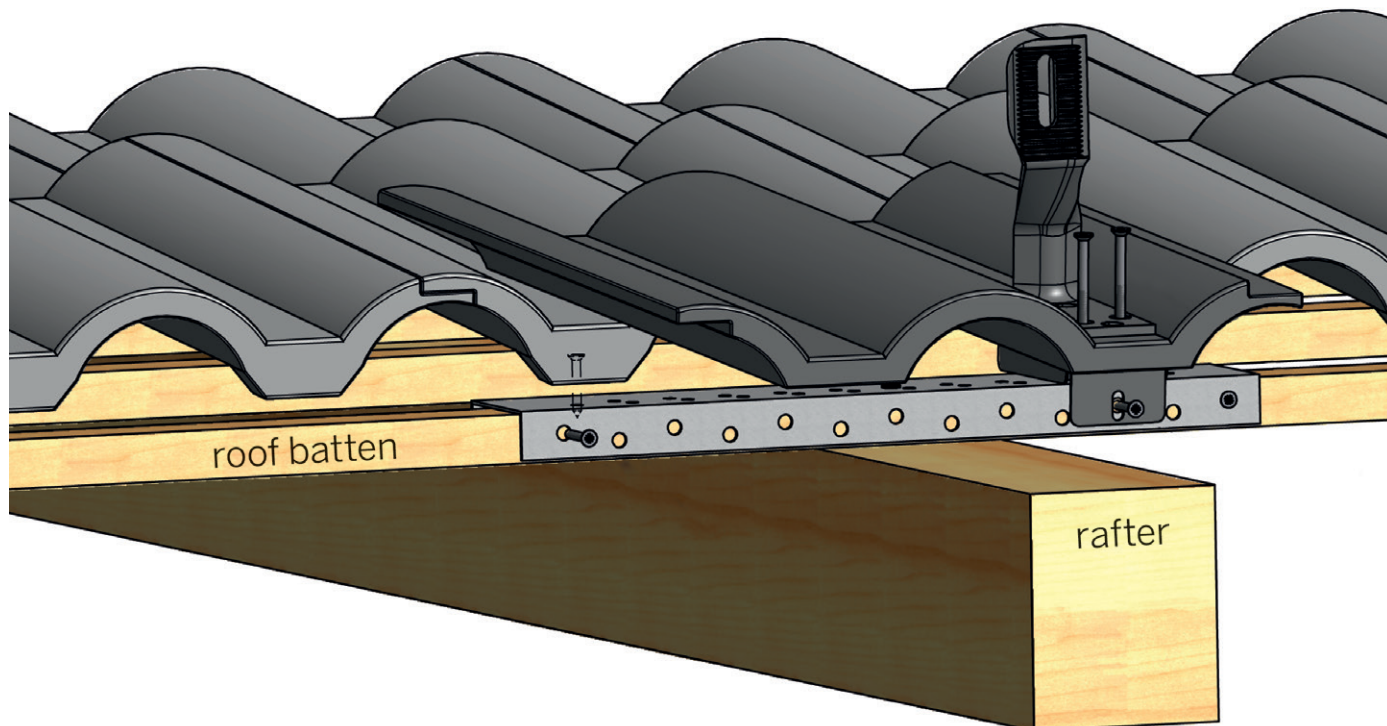

IBC roof hook “Mammut Form S+”

Broken tiles or other roof damages belong to the past with the IBC TopFix 200 roof hook “Mammut Form S+”. This roof hook distributes loads on its additional beam on the bottom side homogeneously among roof battens and rafters and consequently prevents damage to the roofing. Thanks to the combination of roof hooks and shaped tiles, only the existing roof tile needs to be replaced by “Mammut Form S+” – as a result, time-consuming and expensive handling of the roof tiles is no longer necessary. Carrier rails of the IBC TopFix 200 system can continue to be used horizontally and vertically. Its safety aspect is also convincing: static tests confirmed its especially good suitability for regions with heavy snow and wind load.*

Highlights:

- Statically suitable for high snow and wind loads
- Suitable for horizontal and vertical installation
- Roof hook combined with profiled sheet roof
- Complete with 400 mm support beam including self-drilling screws for screwing to the roof structure
- Corrosion protection thanks to combination of hot-dip galvanized steel and powder coating
- Available in the colors chestnut brown, dark brown, brick red, anthracite and red brown
- 10 year product warranty**

*Static design using PV Manager is required.
